

Visual cues for cricket batsmen (conference presentation)

In April 2007, Sean Muller presented his research on Visual Cues in Cricket Batting at the 3rd World Congress of Science and Medicine in Cricket, held at the Hilton Hotel, Bridgetown Barbados. Delegates who attended the conference were sports scientists, doctors and physiotherapists from the UK, South Africa, India, West Indies and Australia. Sean's presentation discussed the purpose of the research, how world-class batsmen read bowlers deliveries, as well as the value of the research to player assessment, talent identification, use of the tools developed in the research for determining the value of sport-specific visual training programs and use of the tools to assess the deceptive abilities of bowlers.
